# Overview.

Providing the latest in ultra low latency and high throughput market data technology. Delivering market data faster and smarter to the demanding financial arena.

With headquarters in the heart of Chicago's financial district SpryWare is known for providing standardized market data via direct exchange feeds to their clients. SpryWare's flagship product, The Market Information Server (MIS) ™, represents the latest and fastest in the low-latency, DMA marketplace. MIS™ is a fully managed "ticker plant in a box" targeted towards customers needing direct market connectivity for processing high-frequency data. MIS™ processes and delivers this data with the lowest available latency without sacrificing reliability.

SpryWare is a co-author of the FAST™ protocol and an active participant and contributor to The Financial Information eXchange ("FIX") Protocol. This uniquely qualifies SpryWare as a technology enabler for those in the financial services industry seeking standards-based solutions.

The philosophy of SpryWare is to constantly develop superior technology. With this in mind, the SpryWare software was specifically designed to take advantage of the advent of multi-core processors, and fully utilizes each available core to the limit. SpryWare also promotes the elimination of cumbersome proprietary market data protocols. This combination of software design and market data standards reduces the overall acquisition costs associated with implementing an ultra-low latency direct market access solution.

Managed by industry experts, SpryWare has extensive experience developing cutting edge market data technologies. As an independent company, they work quickly and agile when implementing new features and functionality. Formed in 2004 and achieving aggressive growth rates, SpryWare is quickly setting industry standards themselves.

Summary:

As co-authors of the FAST™ protocol and an active participant and contributor to FPL SpryWare has taken a leadership role in the establishment of market data standards.

Solutions:

- **The Market Information Server (MIS)™** represents the latest and fastest in the low-latency, DMA marketplace.

- **A fully managed "Ticker plant in a box."**

Delivering Higher Throughput Smarter™
